Mimi - original OpenArt 15-second video

AUDIENCE-FIRST VIDEO QUALITY · sampled-visual-motion-v5

Standalone viewer experience is primary. Motion and source-plan fidelity are separate diagnostics. Audience engagement and retention are not measured here.

CREATIVE VIDEO REVIEW

CREATIVE_REVIEW_EVALUATED

Review basis: assistant inspection of timestamped source frames. Automated provider review was not run; paid provider calls: 0.

Viewer experience	Rating
hook	MODERATE
engagement	MODERATE
payoff	MODERATE
Rewatch & sharing potential	WEAK

Recommendation: REVIEW

[0.0, 0.5, 2.0]s: The close framing and expressive character make the note-removal problem readable, but the opening contains little visual surprise.

[6.25, 7.0, 8.0, 10.5, 11.0]s: The situation becomes visibly worse as notes spread across Mimi and the cabinet; from roughly 8 to 11 seconds mostly gaze and expression change, with little new visual information.

[12.25, 13.5, 14.5]s: The sneeze visibly scatters the notes, clears the paws and leaves notes on the cabinet edge. This rewards watching, although the narrow cabinet view limits the final cabinet-mess impression.

Biggest weakness: The reaction around 8-11 seconds takes too long relative to its new visual information.

One action: Shorten the 8-11 second reaction and move into the sneeze sooner.

Decision support only. The owner may publish despite a weak or unavailable creative review. Automatic publishing is disabled; technical and independent mandatory restrictions remain separate.

Secondary: technical motion measurements

CLASSIFICATION	MOTION SCORE	MEASUREMENT CONFIDENCE	TIMELINE COVERAGE
HIGH_MOTION_EVIDENCE	**89.3 / 100**	**99.2%**	**99.3%**

Technical motion interpretation

V5 combines deterministic temporal evidence with contextual hold, rebound, hook, payoff, loop, recurrence, and provenance-aware readiness evidence. It does not infer platform performance or fabricate semantic actions.

Dimension	Result	What the evidence supports
Hook	MODERATE	Opening visual activity; semantic readability is shown separately.
Payoff	UNKNOWN	Motion and semantic ending evidence where available.
Loop	PARTIAL	Endpoint similarity and continuity evidence; not a retention claim.

Motion profile by time

Each bar is the normalized average visual change in that segment. Exact time boundaries and measurement coverage remain visible.

Segment	Time	Avg motion	Profile	Coverage
S0	0.00–1.51s	99.7%		100.0%
S1	1.51–3.02s	87.0%		100.0%
S2	3.02–4.53s	99.5%		100.0%
S3	4.53–6.04s	92.4%		100.0%
S4	6.04–7.55s	91.6%		100.0%
S5	7.55–9.06s	70.9%		100.0%
S6	9.06–10.57s	81.9%		100.0%
S7	10.57–12.08s	78.1%		100.0%
S8	12.08–13.59s	100.0%		100.0%
S9	13.59–15.10s	67.0%		93.1%

Measurement quality

Metric	Measured value	Interpretation
Valid frame pairs	60	Decoded frame-pair measurements.
Decode success	98.4%	Media decode and sampling quality only.
Opening motion	99.7%	Visual change in the opening window.
Overall motion	87.0%	Duration-weighted visual change.

Ending motion	67.0%	Visual change in the ending window.
Requested / decoded	62 / 61	Sampling transport result.

Observed visual beats

Beat	Time	Observed action	Consequence / state
—	No semantic beat record	—	—

Evidence limits

• Prompt fidelity (diagnostic only): PROMPT_FIDELITY_NOT_EVALUATED
• Semantic evidence coverage: NONE
• No imported retention curve, audience metric or platform outcome is used.
